

One-Page Website Creation & Deployment using Replit

Presented to the Faculty of Ateneo de Davao University

In partial fulfillment of the requirements for **GE 3219 21st Century IT Skills**

2nd Semester, S.Y. 2025-2026

Year 2, Section A

Initial Prompt

To create the initial prompt, I first consulted ChatGPT to craft a neat, structured prompt for Replit to build the initial website. The prompt included all the required sections in the website, which were topic overview, importance, visuals, and call-to-action, as well as some additional formatting instructions. The result is shown below:

In text, the initial prompt I gave Replit is as follows:

“Create a responsive one-page website using HTML, CSS, and a little JavaScript for a mental health advocacy campaign.

The website should be clean, modern, and calming in design (use soft colors like blue, green, lavender, or pastel tones). Use readable fonts and ensure accessibility (good contrast, alt text for images).

Structure the page with the following sections:

1. Hero Section

- Include a powerful headline about mental health awareness (e.g., "Your Mind Matters").*
- Add a short, supportive tagline.*
- Include a calming background image or gradient.*
- Add a prominent “Get Help” or “Learn More” button that scrolls to the next section.*

2. Topic Overview

- Provide a brief explanation of mental health (what it is and why it matters).*
- Keep it concise and easy to understand.*
- Use icons or small illustrations to support the text.*

3. Importance of Mental Health

- *Explain why mental health awareness is important (impact on individuals, families, and communities).*
- *Include 2–3 key statistics (use placeholders if needed).*
- *Highlight stigma reduction and the importance of seeking help.*

4. Visual Section

- *Include a section with calming or meaningful visuals (e.g., illustrations of support, self-care, or community).*
- *Add captions that promote positivity and understanding.*
- *Ensure images are responsive and properly spaced.*

5. Call to Action (CTA)

- *Encourage users to take action (e.g., “Talk to someone”, “Reach out for support”, “Join the movement”).*
- *Include buttons such as:*
 - *“Find Help”*
 - *“Contact Us”*
 - *“Share Your Story”*
- *Add a simple contact form (name, email, message).*

6. Footer

- *Include a short message of encouragement.*
- *Add placeholder links to resources or hotlines.*
- *Include social media icons.*

Additional Requirements:

- *Make the website fully responsive (mobile-friendly).*

- Use smooth scrolling for navigation.
- Add subtle animations (fade-in effects or hover transitions).
- Keep the layout simple, not cluttered.
- Comment the code for clarity.

Optional:

- Include a dark mode toggle.
- Include a testimonials or quotes section.

Output the complete code (HTML, CSS, and JavaScript in one file or separated if preferred)."

Refinement Prompts (at least 2 more)

Following the creation of the initial one-page website, I included additional refinement prompts to create the finalized output. In total, I included 6 refinement prompts, so it aligns with what I want it to be. These prompts enhance its visual appeal in small or large areas, creating a cohesive site. The refinement prompts are as follows:

Refinement Stage	Prompt
1st Refinement	<i>Add additional images in the overview</i>
2nd Refinement	<i>Improve the "Words of Hope" section and make the textboxes stand out from the white background</i>
3rd Refinement	<i>Add matching visual icons to the statistics in "Why Mental Health Awareness Matters"</i>
4th Refinement	<i>Make the name of "Adam Ant" match with the corresponding image of a woman</i>
5th Refinement	<i>Improve the dark mode version of the site</i>

6th Refinement

Make the white background of the "Take the First Step" section darker in dark mode

Screenshots of Outputs and Website Link

The website underwent many changes in its design and content, whether big or small. The initial output, as well as the initial prompt, are presented below:

After typing in the 1st refinement prompt, which referred to the prompt of adding additional images to the overview, the output became:

I noticed that in the original output, the Words of Hope section of the page had colors that blended into each other. So, for the 2nd refinement prompt, I gave a prompt to improve its formatting and colors so the quotes stand out. It then became:

After that, I believed that the statistics shown in the Why It Matters section needed visual elements. The 3rd refinement prompt was then input into Replit to add visual icons. It resulted in:

When I reviewed the content for the Words of Hope section, I noticed a discrepancy between the male name "Adam Ant" and the woman in the image next to it. I then added a prompt to correct that mistake.

When I was satisfied with the light mode variant of the site, I then checked its dark mode. I noted that it looked off compared to its light mode counterpart. I gave Replit a prompt to improve its visual appearance, keeping its quality consistent with the light mode.

Despite the prompt to enhance the website's dark mode, a bright section was found in the Take the First Step call-to-action. Therefore, for my final refinement prompt, I instructed Replit to make it darker.

I checked the output afterward and was satisfied with its content and appearance. Once I was sure I had no more adjustments to make to the website, I published it. The website link of the final output is presented below:

Final Reflection

I found the content and general design of the website to meet my personal criteria for appeal, cleanliness, and not too wordy. The initial output was understandable and emphasized the importance of mental health, with short paragraphs that made it easy to read and follow. In that aspect, Replit worked well throughout the initial output.

However, it also needed more inputs to refine it further. For one, while clean, some sections had a hard-to-distinguish design, and the colors were too similar in brightness. Another was the female profile picture paired with a male name, and the dark mode colors clashed with the pastel colors from light mode. The refinement prompts served well in turning the somewhat rough initial output into something more polished.

I learned that outputs from AI models can be improved with additional refinement prompts. I haven't done anything like that before. The closest one would be me asking ChatGPT follow-up questions about its initial output. Furthermore, I learned how to enter refinement prompts to polish the output into one that meets my standards. Overall, when it comes to AI prompt engineering, a single prompt may not be enough to produce a fully professional result, underscoring the importance of integrating follow-up or refinement prompts to guide the AI toward the desired final output.
